NATIONAL INHALANTS & POISONS AWARENESS WEEK MARCH 21-27, 2004

THEY'RE ALL OVER YOUR HOUSE. THEY'RE IN YOUR CHILD'S SCHOOL. IN FACT, YOU PROBABLY PICKED SOME UP THE LAST TIME YOU WENT TO THE GROCERY STORE. FIND OUT ABOUT INHALANTS, BEFORE YOUR CHILDREN DO.

The Facts of Inhalant Use:

- The misuse and abuse of legal, everyday products to "get high" is a *silent epidemic*.
- One in five eighth graders has "sniffed" or "huffed" an inhalant at the risk of brain damage and even death. Before eighth grade, more kids have used inhalants than marijuana.
- Over a million youth have experimented with inhalants.
- More than 1,000 products are potentially abusable.
- Inhalant use can cause long-term physical and psychological damage. Inhalant users can suffer from heart, liver, kidney and brain damage.
- The key to preventing inhalant use is to educate yourself and your children.

For information on inhalant use, contact:
